Change

Pairing code

XXXX-XXXX-XXXX

Code format shown is a placeholder.

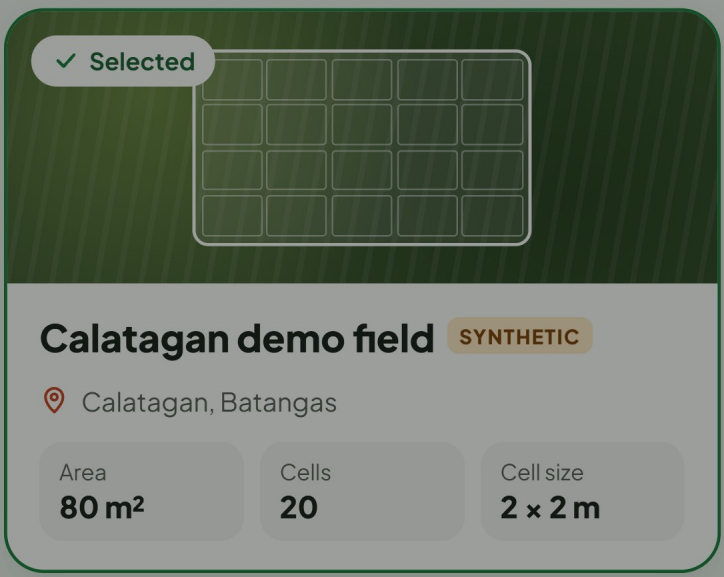

Pair this phone →

No account, email or phone number. Anyone with this code can view this robot's data, so keep it private.

STEP 2 OF 2

Choose your field

Pick the field for the robot's next run.

Calatagan demo field SYNTHETIC

Calatagan, Batangas

Area	Cells	Cell size
80 m²	20	2 × 2 m

Other fields

Other fields not yet available.

Other fields not yet available.

Use Calatagan demo field?

This saves your choice for the next run. The robot already carries this field's profile; the app does not change any robot setting.

RoboLime Working Updated 1 min ago

Working: 7 of 20 cells (35%)

12.40 V
Battery · health TBC

575 mL
Lime commanded

Self-check 8/8 OK

Calatagan demo field

SYNTHETIC

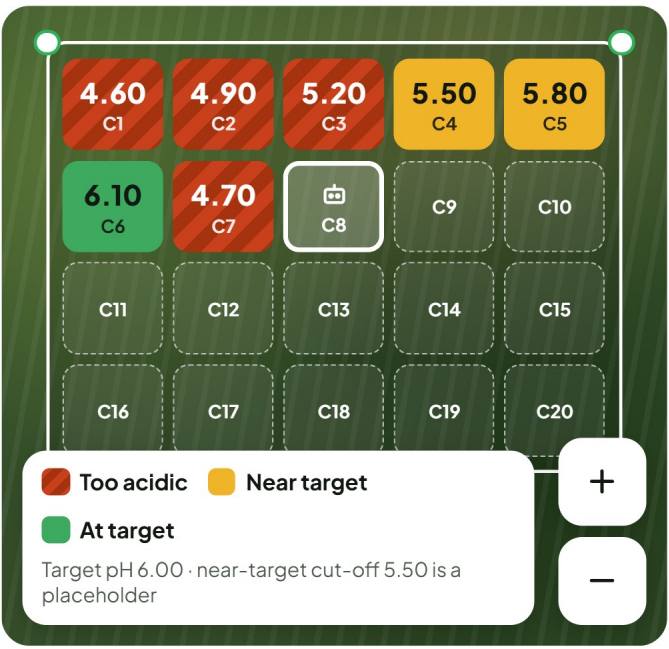

Calatagan, Batangas · 20 cells · 2 m × 2 m

Field laptop

6 of 7 measured cells needed lime
13 cells left · cells fill in as the robot reports

Field map · soil pH

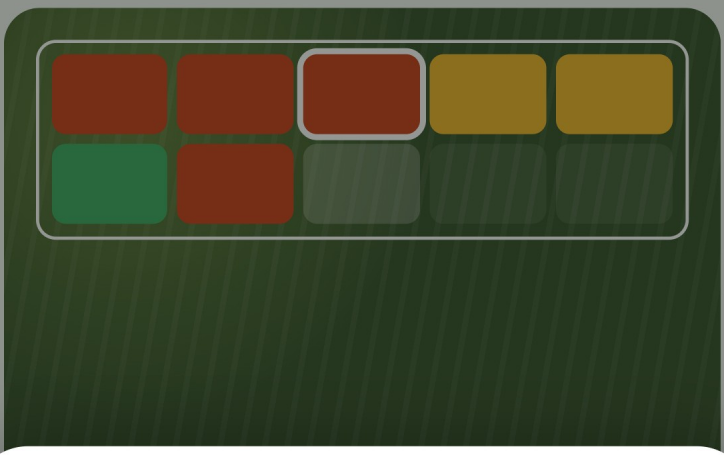

Tap a cell for readings

Robot reports after each cell, so status can be one cell behind. Cells are placed by cell number, not GPS.

Soil temp.

Lime commanded
100 mL

Expected post-correction pH
6.00

Synthetic demo values. Commanded volume is not a measurement of liquid delivered.

Run complete Updated 4 min ago

12.10 V	1,800 mL	20 / 20
Battery · health TBC	Lime commanded	Cells done

Run results SYNTHETIC

Dosing run · Calatagan demo field · 15 Jan 2026, 8:00–9:00 AM

Cells limed
17 of 20

Lime commanded
1,800 mL

Median pH, measured
5.25

Median expected pH
6.00

Median expected pH uses expected post-correction pH for limed cells and measured pH for the rest.

Measured pH | Expected after lime

Too acidic | Near target | At target (6.00+)

Soil pH measured by the robot before liming. Near-target cut-off 5.50 is a placeholder.

Field conditions (medians)

EC	Moisture
0.35 [unit TBC]	**27.0%**
Soil temperature	Season
26.8 °C	**Synthetic season 1**

No internet, so seasonal weather defaults were used (rain 100 mm/month, fixture). Forecasts by Open-Meteo.com when online.

Top 5 crops for this field

Best crop in each category, ranked by rule score. Rule set synthetic-dev-0001.

Development fixture: crop names, ranges and scores are placeholders until the research team supplies sourced data.

1 **Synthetic crop A (fixture)** — Synthetic category 1 — **82**

Field pH 6.00 is inside this fixture's pH range 5.00–6.50. Fixture score, not a sourced suitability range.

2 **Synthetic crop B (fixture)** — Synthetic category 2 — **76**

Field pH 6.00 is inside this fixture's pH range 5.10–6.60. Fixture score, not a sourced suitability range.

3 **Synthetic crop C (fixture)** — Synthetic category 3 — **71**

Field pH 6.00 is inside this fixture's pH range 5.20–6.70. Fixture score, not a sourced suitability range.

4 **Synthetic crop D (fixture)** — Synthetic category 4 — **64**

Field pH 6.00 is inside this fixture's pH range 5.30–6.80. Fixture score, not a sourced suitability range.

5 **Synthetic crop E (fixture)** — Synthetic category 5 — **58**
